

Choose Sirius to help you unlock the potential of Cisco networks

As a worldwide leader in networking solutions, Cisco helps people connect, communicate and collaborate. Because networks are a central part of communications for enterprises, homes and schools, Cisco products are often part of the foundation of these networks.

Sirius is a Cisco Premier Partner with Advanced Specializations including security, unified communications, wireless, and data center technologies. We work primarily with Cisco's Security, Data Center and Unified Communications solutions. Strategic Computer Solutions, acquired by and now an integral part of Sirius Computer Solutions, received Cisco's Advanced Security Partner FY 2007 for the East.

Security: Defend your business against disruption

Cisco products cover a vast array of security practices, including:

- Anomaly detection and mitigation
- Application optimization and security
- Compliance validation
- Endpoint security
- Firewall
- Identity management
- Integrated router/switch security
- Multifunction security
- Physical security
- Network intrusion protection
- Security management
- VPNs

Cisco provides a comprehensive approach to network security that includes:

- Infrastructure devices with embedded security
- Security devices with native network intelligence
- Policies for a collaborative and adaptive security system
- Services that maximize network effectiveness

By implementing security products and practices at the network level, you can:

- Reduce complexity
- Enable tighter integration
- Close risk gaps
- Provide greater visibility to end-to-end security
- Make security easier to deploy and manage
- Implement advanced capabilities while protecting past investments

SPOTLIGHT

Cisco Partner Sirius deploys Cisco NAC Appliance to protect college networks from students' computers

Sirius has already deployed Cisco NAC (Network Admission Control) Appliance, formerly known as Cisco Clean Access, on several college campuses to help ensure that every student computer that attempts to access the network is clean and compliant.

No viruses or worms have affected the campuses' networks since deployment.

Sirius and Cisco: Technology Solutions for Business

- **Data Center:** Network-based data center infrastructure services
- **Security:** Protection for critical business processes
- **Mobility:** Creating secure connections and rich experiences
- **TelePresence:** Creating live, face-to-face meeting experiences over the network
- **Network Systems:** Making your network a platform for innovative services that improve customer, employee, and partner experience
- **Unified Communications:** Integrating voice, video, and data networks to lower costs and increase employee productivity

"Cisco is a critical component of our ability to help clients implement secure, efficient, manageable solutions for both voice and data. With the acquisition of Strategic Computer Solutions late in 2007, Sirius has now invested in a national practice with deep skills in Cisco products and offerings."

—Vinu Thomas, Practice Manager
Security, Networking and Voice Solutions

More Cisco Solutions Available from Sirius

Data Center: Enhance business resilience and agility

Cisco storage networking solutions and products fall into several categories including SAN consolidation, business continuance, advanced SAN security, SAN management, intelligent fabric applications, and data center solutions. SANs are helping companies reduce capital and operating expenses, increase agility to support changing business priorities and revenue growth, and improve long-distance replication, backup and recovery to meet regulatory requirements and industry best practices.

Sirius works with Cisco storage networking products primarily through our IBM partnership. IBM and Cisco together offer an enterprise-wide approach to scalable, available and more easily administered storage networking infrastructures. IBM and Cisco SAN products and solutions give our clients a better way to access, manage and protect their growing storage requirements.

Unified Communications: Business every time, everywhere

Cisco is a leader in the area of communications and Voice over IP (VoIP). As companies of all sizes face increasingly complex environments and increasingly mobile workers, communications requirements dictate a wide array of communications methods from any number of locations. Cisco's voice and unified communications solutions give you the ability to collaborate using advanced applications from an integrated interface.

Cisco VoIP solutions include products that fall into one of many categories, including: video conferencing, integrated voice and Web conferencing, mobile IP soft phones, voicemail, database access and queries, and customer information.

TelePresence: Connect in person—from anywhere

Cisco TelePresence combines high-quality audio, high-definition video and interactive elements to deliver an in-person meeting experience over your network. The overall Cisco TelePresence solution comprises endpoints, management software and multi-point switching capabilities, taking advantage of the reliability, quality and security of the existing network infrastructure.

Network Systems: The network is the platform

Cisco Network Systems are the foundation for the services and applications you need to realize the potential of your business. Cisco switches, routers and software together create an inherently intelligent, integrated network to adapt for your current and future business needs by providing secure connectivity between employees, customers and information, delivering quality, real-time applications on a converged network platform, ensuring access to information from anywhere, automating a manageable and self-defending network, and reducing operating expenses.

Mobility: Your business moves with you

Cisco Mobility Solutions deliver secure connections, rich experiences, and intelligent services to help your organization improve the efficiency of employees and enhance the experiences of customers and partners; collaborate in real-time using your choice of tools; maintain security and access policies for devices and networks; redefine business processes with voice, guest, location, security, and other mobility services; track assets in real time; and turn an entire city into a hotspot, allowing city workers and citizens to do their jobs anywhere.
