

Address the new business and IT security realities

Protecting one of the most valuable assets to your business—your data and information—in an increasingly complex IT environment with limited budgets is a challenge. With more than 50 percent of attacks targeting the browser and new, multi-faceted attacks rising, more effective and manageable security approaches are needed.

BE PREPARED

Sirius security solutions present a comprehensive approach to protecting every aspect of the organization. We recognize that security relies on a combination of policies, procedures, technology controls, and a proactive approach to understanding and managing risk, in order to:

- ✦ Ensure compliance preparedness and readiness
- ✦ Protect your company's reputation and market share
- ✦ Avoid costly breaches and fines
- ✦ Maintain the privacy of sensitive information
- ✦ Manage risk to enhance business agility and growth

TAKE THE NECESSARY STEPS

Every organization must be prepared for security threats if it wants to stay in business. Sirius will take you through all the steps to protect your business and evaluate all your risks, and can help conduct exercises to build your response and recovery processes.

Security Solutions Address the New Business Complexities

WHICH SERVICES ARE RIGHT FOR YOU?

To ensure maximum business value, strategic alignment and operational efficiency, you have to ask yourself the following questions related to:

Security Program Development & Policy Creation:

Do we have an overall security strategy, and do we have effective security policies in place?

Governance, Risk & Compliance:

How can we improve our audit results, or streamline the audit process?

Compliance Readiness & Remediation:

What can we do now to prepare for the compliance process?

Enterprise Security Assessments:

How does our security posture compare to best practices, and what are our potential vulnerabilities?

Application Security:

Are we at risk of a potential compromise of Web-facing applications?

Managed Security

Is it a good idea to have someone actively manage and monitor our security for us?

Your Sirius representative can help you consider these questions and determine the best course of action for your organization.

SECURITY SOLUTIONS ENSURE BUSINESS VALUE

Sirius' approach ensures maximum business value, strategic alignment and operational efficiency by helping reduce exposure to risk, costs and time. Our services will provide actionable recommendations to ensure controls are in place that address regulatory obligations, protect critical operations and assets and limit exposure to risk. Sirius security offerings include:

Data Loss Prevention

We help you reduce proliferation of confidential data across enterprise data centers, client systems, remote offices, and end-user machines. We can identify broken business processes transmitting confidential data and help you monitor and protect communications of sensitive content to public websites.

Governance, Risk and Compliance

RSA® Archer eGRC Solutions allow an efficient, collaborative enterprise governance, risk and compliance (eGRC) program across IT, finance, operations and legal domains. With RSA Archer and code-free configuration, you can manage risks, demonstrate compliance, automate business processes, and gain visibility into corporate risk and security.

Managed Security Solutions

IBM® Managed Security Services provides 24/7/365 monitoring and management of security technologies you house in your environment. IBM provides a single management console and view of your entire security infrastructure, allowing you to mix and match by device type, vendor and service level to meet your individual business needs while drastically reducing your security costs, simplifying security management and accelerating your speed to protection.

Endpoint Protection

We provide unmatched protection from the market leader in endpoint security and can seamlessly integrate antivirus, antispyware, firewall, intrusion prevention, and device and application control. Requires only a single agent and offers powerful central management of security on Windows® and Mac OS® endpoints.

Virtualization Security

Mitigate, monitor and manage the latest security threats and vulnerabilities and lower the costs of applying the latest security expertise, processes and technologies.

SECURITY SERVICES FEATURES AND BENEFITS

Security Program Development and Policy Creation Services

- ♦ Ensure a comprehensive, in-depth defense strategy
- ♦ Gain organizational efficiencies and better manage overall risk
