

Sirius Enterprise Single Sign-On

Entry Edition

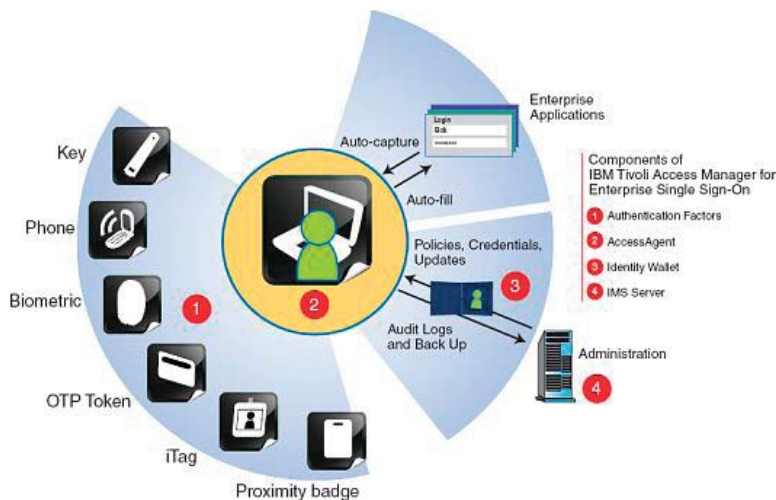

Simplify password administration, satisfy users, and enhance security

Managing multiple logins frustrates users and administrators, hinders productivity, and places a burden on everyone throughout your organization. It can lead to:

- Escalating Help Desk costs
- Inconsistent compliance with password security policies
- Difficult management of security in a shared desktop environment
- Incomplete user access reporting

Sirius Enterprise Single Sign-On Entry Edition is a flexible, simple yet comprehensive solution that addresses these issues by providing users with the ability to log in once and be securely authenticated to your applications. Yet it doesn't require a lengthy and complex implementation effort. The business value you realize includes:

- Reduced support costs
- Improved user productivity and convenience
- Strengthened security by controlling access to business assets
- Compliance enforcement and reporting
- Visibility into user activity

Sirius Enterprise Single Sign-On Entry Edition is a tailored solution that features:

- Single sign-on encompassing up to six applications
- Password self-service
- Web-based administration
- Compliance reporting, audit logs, and real-time monitoring
- No change to the existing infrastructure

SPOTLIGHT

Sirius Enterprise Single Sign-on Entry Edition is an integrated solution that quickly addresses your need to let users log-in once and be securely authenticated to all networked applications.

Software:

- IBM® Tivoli® Access Manager for Enterprise Single Sign-On

Supported Platform:

- Windows Server®

Services:

- A **Solution Outline** tailored to your needs and system environment, resulting in a roadmap for your implementation
- **Solution Implementation** to install and configure IBM TAM ESSO, create user profiles, and test the solution
- **Solution Delivery** to hand-off the solution, transfer knowledge and ensure self-sufficiency

Cost:

- \$44,000 including software and services for 100 users, \$71 for each additional user (hardware priced separately)

Implementation Timeline:

- Typically five weeks from hardware installation

Why choose Sirius for your single sign-on solution?

Sirius has knowledge and experience gained through numerous successful implementations of IBM Tivoli Single Sign-On solutions. We use a proven, proprietary methodology to ensure success and demonstrate value throughout each engagement:

- Define: **Sirius Solution Outline**
 - Assess current security environment by a Tivoli certified architect
 - User management procedures
 - Corporate security policies
 - Self-enrollment and password management procedures
 - Network infrastructure
 - Select targeted applications
 - Identify technical requirements
- Develop: **Sirius Solution Implementation**
 - Install and configure IBM TAM ESSO in a single production-ready environment (excluding high availability)
 - Create up to six single sign-on application profiles
 - Assist in the planning of single sign-on client software deployment
 - Empower client to deploy solution across a wide user base
 - Conduct profile testing and acceptance
- Deliver: **Sirius Solution Delivery**
 - Conduct a complete hand-off of solution
 - Transfer knowledge and best practices to your staff for ongoing support
 - Review and close-out project

Also, Sirius Enterprise Single Sign-On Entry Edition will provide you with valuable reusable assets such as application profiles that help you quickly expand the solution beyond the initial set of applications. We also provide documented best practices.

The Sirius Identity and Access Management team and our solutions

Our security experts are focused on delivering solutions that help our clients plan for and manage their identity and access issues. With the Sirius Identity and Access Management team, you get knowledgeable experts who can help you take on the challenges of improving efficiency, enhancing security and securing compliance. Our consultants are skilled in conducting discovery workshops to address the essential business processes of identity and access management, particularly with regard to:

- User provisioning
- Password management
- Compliance
- Role management
