

Virtual - Physical - Cloud Information Availability. That Works.

“The installation procedure is very straightforward....It took less than an hour and a half, which I believe is amazing. I have a high level of confidence in our high availability solution from Vision. Definitely the right decision.”

Krispy Kreme Doughnuts

That Works.

Whether your critical data and applications reside on virtual, physical or cloud servers, Vision Solutions offers the most trusted solutions in the industry for keeping users online and information and tools always available. Vision Solutions created one of the first products to protect physical environments, and constant innovation has led to cutting-edge technologies that protect virtual servers, even providing real-time replication and failover to the Cloud.

For nearly 20 years, Vision's MIMIX, Double-Take and iTERA offerings have kept business-critical information highly protected and available with products that are easy to install and manage. Today, Vision products are installed at over 25,000 organizations worldwide. As the industry's largest high availability and disaster recovery technology provider, Vision Solutions works closely with a global partner network that includes IBM, HP, Microsoft, VMware and Dell.

If that works for you, we should too.

Information Availability. That Works.

Information is the engine that drives your business. It's a mission-critical resource that requires information availability solutions from a proven company. You need availability that works.

Vision Solutions leads the information availability industry in quality and innovation, and in solutions that are both comprehensive and easy to run. Whether you have Windows, Linux, IBM i or IBM AIX on a single physical server or on hundreds of virtual environments across multiple data centers, Vision Solutions has the road-tested technologies you need for peak availability.

Our solutions work for over 25,000 companies worldwide. If that works for you, we should too.

For Nonstop Business Operations: High Availability. **That Works.**

“Our Vision product has enabled us to go about business as usual so that system outages—if they occur—are essentially transparent to the students and faculty who use our online platform.”

Suffolk University

Double-Take® AVAILABILITY™

Full-featured, continuous data protection (CDP) and automated switching and failover for true high availability on physical and virtual Windows and Linux environments. Especially designed for VMware vSphere and Microsoft Hyper-V, Double-Take Availability also includes robust hardware and application-independent clustering with or without underlying logical replication. It's robust, yet affordable and very easy to manage. 

i Learn more at visionsolutions.com/Availability.

iTERA AVAILABILITY™

High availability for IBM i environments that is simple to use and easy on your budget. Using remote journaling, iTERA Availability maintains a complete, reliable and accurate backup of your data and applications, and stands ready to switch users to the live backup during system maintenance or failure. 

i Learn more at visionsolutions.com/iTERA.

MIMIX® AVAILABILITY™

High availability protection for the most demanding IBM i environments, large and small. The Vision Solutions Portal (VSP) simplifies administration while ensuring absolute data integrity in any environment, including those using intra-server, bi-directional and cascade replication. MIMIX Availability virtually eliminates planned and unplanned system downtime, boosts productivity and accelerates business processes.

For Rapid, Complete Recovery of Data: Disaster Recovery. **That Works.**

“Our true capital is tied up in knowledge and unique production machines. In the event of a calamity, our solution from Vision would save the day, if it ever came to that. The ROI is so tremendous, it cannot be estimated in terms of money only.”

Nelipak

Double-Take® RECOVERNOW™

Highly efficient disk-to-disk protection that enables affordable, yet powerful recovery methods for physical or virtual Windows environments. Double-Take RecoverNow can replicate changes in real time or take scheduled snapshots of your data—either way, it's a huge improvement over tape. When you need to recover, you can do so from any point in time. 

i Learn more at visionsolutions.com/Recovery.

Double-Take® CLOUD™

Double-Take Cloud combines the simplicity of real-time, full-server backup to the cloud with the assurance of the market's most trusted and comprehensive disaster recovery software. Paired with Amazon EC2™ cloud infrastructure, Double-Take Cloud eliminates the need for costly dedicated DR data centers. When needed, quickly recover to Amazon's servers or your own. 

i Learn more at visionsolutions.com/DTCLOUD.

MIMIX® RECOVERNOW™

MIMIX RecoverNow continuously captures changes that occur between tape backups and saves them to DASD or to any low-cost Windows, Linux or UNIX storage devices you already own. Using powerful CDP capabilities, MIMIX RecoverNow allows you to restore data and objects to near the point of failure, or to any point in time you choose.

For Highly Optimized Operations: System and Data Management. **That Works.**

“The Vision solution for migrations was easy, cost-effective and the best solution out there.”

Locaweb

“Before Vision, we only had one nighttime download, and it was huge...[with Vision] we have continuous access to treasury, factory production, stock and inventory data in real time.”

Grupo Uriach

Double-Take® SHARE™

Make accurate decision-critical information available to the people who need it most, when they need it. Double-Take Share provides easy to configure, real-time sharing of application data to any database format or operating system. The right data in the right hands at the right time can make all the difference between opportunities seized and missed, between profit and loss. Going beyond simple ETL solutions, Double-Take Share unlocks the data silos in your organization. 

i Learn more at visionsolutions.com/DTShare.

Double-Take® MOVE™

Providing no-downtime, while-active migrations for physical and virtual Windows and Linux environments, Double-Take Move is feature-rich and works transparently while users stay online and continue to work. Migration and cutover are performed when it is convenient, freeing up your weekends. All migrations are done from a central migration console, built just for server and data migrations to make it simple and straight forward to keep your information available and your business running while the migration takes place in the background. 

i Learn more at visionsolutions.com/DTMove.

MIMIX® MOVE™

By eliminating the pain associated with upgrades and migrations to IBM® Power™ Systems servers, MIMIX Move allows you to continue operations as usual during the migration process—with virtually no downtime. Using Vision's advanced high availability technologies to rapidly copy business-critical data to your new Power Systems server, MIMIX Move keeps it synchronized with your production system in real-time. After validating your new Power Systems server environment, move users and processes to it in just minutes. 

i Learn more at visionsolutions.com/MIMIXMove.

Double-Take® FLEX™

Double-Take Flex reduces the time and expense of desktop provisioning and management while increasing the level of control that you have over your current desktop infrastructure. Using streaming desktop images, Double-Take Flex reduces time-consuming and costly management tasks such as Microsoft Windows OS upgrades, patch management or new application installations. 

i Learn more at visionsolutions.com/DTFlex.

MIMIX® DIRECTOR™

A highly automated systems management solution for IBM i environments, MIMIX Director proactively monitors and optimizes servers, databases and applications. An intuitive console and a wide array of built-in reports guide you to fully controlled and informed system optimization that pays dividends from the very first day.
